MPhil in Engineering for Sustainable Development
BSE in Industrial Engineering

Vertical: Johan Henriksson
Postdoc at Karolinska Institutet and European Bioinformatics Institute
PhD in Medical science
MSc in mechanical engineering/mathematics etc

Dear members of TH - The theme for our candidacy will be *Us*. How can we all, through minor changes, achieve the most for our environment? We believe implementing the following action points would be a terrific start:

- Inform MCR members on the latest green events, policy, and news
- Have the college take stance on sustainability matters on their website
- Host an intercollegiate “green challenge” (i.e. vegan bake off with proceeds going towards something fantastically green!)
- Improve our rankings in the list of college “greenness”, and encourage others on the way
- Motivating and making it simpler for members to live more sustainably (e.g. better access to recycling, especially harder items like batteries)
- Green promise - encourage MCR members to commit to doing one thing this term to reduce their carbon footprint (or live more sustainably); these commitments can be posted in the MCR on a public promise board
- Look into the college’s “food”-print - Can we for example encourage more vegetarian eating by increasing quality or making it a more natural choice? We will also look into food waste and how it is grown and transported

Looking forward to a productive green year together with you all!
