

# MY MANIFESTO

by me

I am running for computer officer.  
As computer officer, I will do computer things.

I (Dr. Kaggie) have over 6 months of experience using a computer and computer mice. I can remove any computer virus using antibiotics. I can import any file by paying customs fees and VAT. I also have the ability of staring at a screen for hours on end.

If you make me your computer officer, GCHQ and NSA will not stand a chance against Tit Hall. As your computer office, I will ensure everyone receives a laptop with exahertz processor speed and terabytes of RAM. I will install completely submersive virtual reality for you to visualise your Cambridge projects *and* your most secret desires.  Everyone will receive superhuman computer AIs as personal assistants.

You might ask yourself, "do I really want this guy to do computer things?" I'm asking myself exactly the same question. The question you should really ask is, "*where's the best party tonight?*" As the guy in charge of your computers, I'll make it my mission that you know where.
